Social Modeling for Requirements Engineering (Information Systems)

Social Modeling for Requirements Engineering (Information Systems)

Much of the difficulty in creating information technology systems that truly meet people's needs lies in the problem of pinning down system requirements. This book offers a new approach to the requirements challenge, based on modeling and analyzing the relationships among stakeholders. Although the importance of the system-environment relationship has long been recognized in the requirements engineering field, most requirements modeling techniques express the relationship in mechanistic and behavioral terms.

This book describes a modeling approach (called the i^* framework) that conceives of software-based information systems as being situated in environments in which social actors relate to each other in terms of goals to be achieved, tasks to be performed, and resources to be furnished. Social perspectives on computing have provided much insight for many years. The i^* framework aims to offer a modeling approach to the relationships embedded in computer systems that is part of an engineering method that offers systematic techniques and tools providing smooth linkages to the rest of the system development process, including system design and implementation.

The book includes Eric Yu's original proposal for the i^* framework as well as research that applies, adapts, extends, or evaluates the social modeling concepts and approach.

From reader reviews:

Martha Williams:

Here thing why that Social Modeling for Requirements Engineering (Information Systems) are different and reputable to be yours. First of all studying a book is good but it really depends in the content than it which is the content is as delicious as food or not. Social Modeling for Requirements Engineering (Information Systems) giving you information deeper as different ways, you can find any publication out there but there is no book that similar with Social Modeling for Requirements Engineering (Information Systems). It gives you thrill looking at journey, its open up your current eyes about the thing that happened in the world which is maybe can be happened around you. You can actually bring everywhere like in park, café, or even in your way home by train. For anyone who is having difficulties in bringing the published book maybe the form of Social Modeling for Requirements Engineering (Information Systems) in e-book can be your alternate.

Stephanie Carter:

Playing with family in the park, coming to see the ocean world or hanging out with friends is thing that usually you may have done when you have spare time, subsequently why you don't try factor that really opposite from that. A single activity that make you not experiencing tired but still relaxing, trilling like on roller coaster you have been ride on and with addition details. Even you love Social Modeling for Requirements Engineering (Information Systems), you are able to enjoy both. It is fine combination right, you still want to miss it? What kind of hang-out type is it? Oh seriously its mind hangout people. What? Still don't have it, oh come on its referred to as reading friends.

Sarah Lopez:

Are you kind of occupied person, only have 10 or maybe 15 minute in your moment to upgrading your mind expertise or thinking skill actually analytical thinking? Then you are experiencing problem with the book compared to can satisfy your short period of time to read it because this all time you only find publication that need more time to be go through. Social Modeling for Requirements Engineering (Information Systems) can be your answer given it can be read by you actually who have those short spare time problems.

Keith Kemp:

A lot of publication has printed but it differs from the others. You can get it by internet on social media. You can choose the very best book for you, science, amusing, novel, or whatever through searching from it. It is named of book Social Modeling for Requirements Engineering (Information Systems). Contain your knowledge by it. Without departing the printed book, it might add your knowledge and make a person happier to read. It is most important that, you must aware about publication. It can bring you from one location to other place.
