Calculating the Weather, Volume 60: Meteorology in the 20th Century (International Geophysics)

Frederik Nebeker

During the course of this century, meteorology has become unified, physics-based, and highly computational. **Calculating the Weather: Meteorology in the 20th Century** explains this transformation by examining the various roles of computation throughout the history of meteorology, giving most attention to the period from World War I to the 1960s. The electronic digital computer, a product of World War II, led to great advances in empirical, theoretical, and practical meteorology. At the same time, the use of the computer led to the discovery of so-called "chaotic systems," and to the recognition that there may well be fundamental limits to predicting the weather.

One of the very few books covering 20th century meteorology, this text is an excellent supplement to any course in general meteorology, forecasting, or history of science.

Key Features

- * Provides a narrative account of the growth of meteorology in the 20th century
- * Explains how forecasting the weather became a physics-based science
- * Studies the impact of the computer on meteorology and thus provides an example of science transformed by the computer
- * Describes three traditions in meteorology:
 - * The empirical tradition of gathering data and making inferences
 - * A theoretical tradition of explaining atmospheric motions by means of the laws of physics
 - * The practical tradition of predicting the weather
- * Analyzes the increasing role of calculation within each of the traditions and explains how electronic digital computers made possible many connections between traditions

Grady Long:

Is it a person who having spare time subsequently spend it whole day by watching television programs or just lying down on the bed? Do you need something new? This Calculating the Weather, Volume 60: Meteorology in the 20th Century (International Geophysics) can be the response, oh how comes? A fresh book you know. You are and so out of date, spending your free time by reading in this brand-new era is common not a nerd activity. So what these textbooks have than the others?

Casey Schnell:

Do you like reading a publication? Confuse to looking for your selected book? Or your book had been rare? Why so many question for the book? But any people feel that they enjoy to get reading. Some people likes reading, not only science book but additionally novel and Calculating the Weather, Volume 60: Meteorology in the 20th Century (International Geophysics) or even others sources were given expertise for you. After you know how the good a book, you feel would like to read more and more. Science publication was created for teacher or even students especially. Those publications are helping them to increase their knowledge. In different case, beside science reserve, any other book likes Calculating the Weather, Volume 60: Meteorology in the 20th Century (International Geophysics) to make your spare time more colorful. Many types of book like this one.

Deborah Lacey:

Reading a reserve make you to get more knowledge from it. You can take knowledge and information from the book. Book is written or printed or created from each source that filled update of news.
