Medical informatics is also often included in the curricula of many other disciplines, including the life sciences, engineering and economics.

This book is the fruit of a collaborative effort between authors teaching medical informatics in France and others who are conducting research in this field. In addition, an international perspective was pursued, as reflected in the inclusion of various developments and actions in both the USA and Europe.

This book is divided into 18 chapters, all of which include learning objectives, recommendations for further reading, exercises and bibliographic references.
