Turbulence in the Solar Wind (Lecture Notes in Physics)

Roberto Bruno, Vincenzo Carbone

Turbulence in the Solar Wind (Lecture Notes in Physics) Roberto Bruno, Vincenzo Carbone

This book provides an overview of solar wind turbulence from both the theoretical and observational perspective. It argues that the interplanetary medium offers the best opportunity to directly study turbulent fluctuations in collisionless plasmas. In fact, during expansion, the solar wind evolves towards a state characterized by large-amplitude fluctuations in all observed parameters, which resembles, at least at large scales, the well-known hydrodynamic turbulence.

This text starts with historical references to past observations and experiments on turbulent flows. It then introduces the Navier-Stokes equations for a magnetized plasma whose low-frequency turbulence evolution is described within the framework of the MHD approximation. It also considers the scaling of plasma and magnetic field fluctuations and the study of nonlinear energy cascades within the same framework. It reports observations of turbulence in the ecliptic and at high latitude, treating Alfvénic and compressive fluctuations separately in order to explain the transport of mass, momentum and energy during the expansion. Further, existing models are compared with direct observations in the heliosphere.

The problem of self-similar and anomalous fluctuations in the solar wind is then addressed using tools provided by dynamical system theory and discussed on the basis of available models and observations. The book highlights observations of Yaglom's law in solar wind turbulence, which is one of the most important findings in fully developed turbulence and directly related to the long-lasting and still unsolved problem of solar wind plasma heating.

Lastly, it includes a short chapter dedicated to the kinetic range of fluctuations, which has recently been receiving more attention from the space plasma community, since this is inherently related to turbulent energy dissipation and consequent plasma heating. It particularly focuses on the nature and role of the fluctuations populating this frequency range, and discusses several model predictions and recent observational findings in this context.

From reader reviews:

Donna Jennings:

The book Turbulence in the Solar Wind (Lecture Notes in Physics) make you feel enjoy for your spare time. You can utilize to make your capable considerably more increase. Book can to be your best friend when you getting tension or having big problem with the subject. If you can make reading through a book Turbulence in the Solar Wind (Lecture Notes in Physics) being your habit, you can get more advantages, like add your own capable, increase your knowledge about many or all subjects. You could know everything if you like start and read a reserve Turbulence in the Solar Wind (Lecture Notes in Physics). Kinds of book are a lot of. It means that, science guide or encyclopedia or other folks. So , how do you think about this guide?

Theodore Rios:

Nowadays reading books be a little more than want or need but also be a life style. This reading behavior give you lot of advantages. Associate programs you got of course the knowledge your information inside the book that improve your knowledge and information. The data you get based on what kind of publication you read, if you want have more knowledge just go with training books but if you want truly feel happy read one using theme for entertaining like comic or novel. The Turbulence in the Solar Wind (Lecture Notes in Physics) is kind of publication which is giving the reader erratic experience.

Henry Evans:

The book Turbulence in the Solar Wind (Lecture Notes in Physics) will bring you to definitely the new experience of reading a new book. The author style to explain the idea is very unique. When you try to find new book you just read, this book very appropriate to you. The book Turbulence in the Solar Wind (Lecture Notes in Physics) is much recommended to you you just read. You can also get the e-book in the official web site, so you can easier to read the book.

Morris Whitfield:

People live in this new day of lifestyle always try to and must have the time or they will get great deal of stress from both way of life and work. So , whenever we ask do people have spare time, we will say absolutely without a doubt. People is human not a robot. Then we consult again, what kind of activity have you got when the spare time coming to you of course your answer will probably unlimited right. Then ever try this one, reading ebooks. It can be your alternative in spending your spare time, the actual book you have read will be Turbulence in the Solar Wind (Lecture Notes in Physics).
