Biophotonics: Concepts to Applications (Graduate Texts in Physics)

Gerd Keiser

Biophotonics: Concepts to Applications (Graduate Texts in Physics) Gerd Keiser

This book introduces senior-level and postgraduate students to the principles and applications of biophotonics. It also serves as a valuable reference resource or as a short-course textbook for practicing physicians, clinicians, biomedical researchers, healthcare professionals, and biomedical engineers and technicians dealing with the design, development, and application of photonics components and instrumentation to biophotonics issues. The topics include the fundamentals of optics and photonics, the optical properties of biological tissues, light-tissue interactions, microscopy for visualizing tissue components, spectroscopy for optically analyzing the properties of tissue, and optical biomedical imaging. It also describes tools and techniques such as laser and LED optical sources, photodetectors, optical fibers, bioluminescent probes for labeling cells, optical-based biosensors, surface plasmon resonance, and lab-on-a-chip technologies. Among the applications are optical coherence tomography (OCT), optical imaging modalities, photodynamic therapy (PDT), photobiostimulation or low-level light therapy (LLLT), diverse microscopic and spectroscopic techniques, tissue characterization, laser tissue ablation, optical trapping, and optogenetics. Worked examples further explain the material and how it can be applied to practical designs, and the homework problems help test readers' understanding of the text.

From reader reviews:

Ralph Garibay:

This Biophotonics: Concepts to Applications (Graduate Texts in Physics) book is just not ordinary book, you have it then the world is in your hands. The benefit you obtain by reading this book will be information inside this e-book incredible fresh, you will get information which is getting deeper anyone read a lot of information you will get. This Biophotonics: Concepts to Applications (Graduate Texts in Physics) without we understand teach the one who reading through it become critical in considering and analyzing. Don't possibly be worry Biophotonics: Concepts to Applications (Graduate Texts in Physics) can bring when you are and not make your handbag space or bookshelves' grow to be full because you can have it in your lovely laptop even telephone. This Biophotonics: Concepts to Applications (Graduate Texts in Physics) having very good arrangement in word and layout, so you will not feel uninterested in reading.

Bruce Crawford:

The book untitled Biophotonics: Concepts to Applications (Graduate Texts in Physics) contain a lot of information on it. The writer explains the girl idea with easy method. The language is very easy to understand all the people, so do not necessarily worry, you can easy to read the idea. The book was compiled by famous author. The author gives you in the new time of literary works. You can actually read this book because you can keep reading your smart phone, or device, so you can read the book throughout anywhere and anytime. If you want to buy the e-book, you can open up their official web-site and order it. Have a nice read.

Donald Warren:

As we know that book is important thing to add our information for everything. By a guide we can know everything we really wish for. A book is a list of written, printed, illustrated or blank sheet. Every year was exactly added. This book Biophotonics: Concepts to Applications (Graduate Texts in Physics) was filled concerning science. Spend your time to add your knowledge about your research competence. Some people has different feel when they reading a book. If you know how big benefit of a book, you can sense enjoy to read a e-book. In the modern era like right now, many ways to get book you wanted.

Mary Adams:

Publication is one of source of know-how. We can add our understanding from it. Not only for students but native or citizen need book to know the revise information of year in order to year. As we know those ebooks have many advantages. Beside many of us add our knowledge, can also bring us to around the world. Through the book Biophotonics: Concepts to Applications (Graduate Texts in Physics) we can get more advantage. Don't that you be creative people? For being creative person must love to read a book. Just simply choose the best book that suited with your aim. Don't always be doubt to change your life with this book Biophotonics: Concepts to Applications (Graduate Texts in Physics). You can more attractive than now.
