Gold and Silver Staining: Techniques in Molecular Morphology (Advances in Pathology, Microscopy, & Molecular Morphology)

Gold and Silver Staining: Techniques in Molecular Morphology (Advances in Pathology, Microscopy, & Molecular Morphology)

Immunogold silver staining is one of the most sensitive techniques available for visualizing the location of antibodies and nucleotide probes that have been bounded to specific antigens or to nucleotide sequences. As gold and silver staining continues to advance research in molecular morphology, this book presents the information you need to know about the various staining methods, their useful applications, and the advantages and drawbacks of each process.

Gold and Silver Staining: Techniques in Molecular Morphology provides a timely description of approaches, methods, protocols, and applications. The contributors cover the latest developments and a wide range of applications from highly sensitive detection of antigens to single copy detection of DNA and RNA. Some of the authors are "living legends" in the field and bring their expertise and experience to this fine collaboration. Written in one consistent style, each chapter includes a concise, but comprehensive introduction, step-by-step protocols with technical hints, and a discussion of results and critical steps.

What differentiates this book from all others like it, is the status of the editors, who have worked on this technique from its inception and have produced innumerable publications on the topic. The other distinguishing feature is that all of the contributors are amongst the absolute foremost leaders from the United States and Europe. Gold and Silver Staining: Techniques in Molecular Morphology presents a complete overview and detailed descriptions of this technique that allows the visualization of molecules that have never been localized before and with hitherto unknown sensitivity. Not only does this book provide an excellent review of this field, but it also serves as a lab manual for those who want to carry out this technique in their laboratory and clinical work. Armed with this information, advances in this powerful field of research will ensue.

From reader reviews:

Vicky Moore:

Now a day people who Living in the era where everything reachable by talk with the internet and the resources inside it can be true or not demand people to be aware of each data they get. How many people to be smart in having any information nowadays? Of course the answer then is reading a book. Reading a book can help folks out of this uncertainty Information mainly this Gold and Silver Staining: Techniques in Molecular Morphology (Advances in Pathology, Microscopy, & Molecular Morphology) book since this book offers you rich info and knowledge. Of course the details in this book hundred pct guarantees there is no doubt in it you probably know this.

John Kuykendall:

Your reading sixth sense will not betray you actually, why because this Gold and Silver Staining: Techniques in Molecular Morphology (Advances in Pathology, Microscopy, & Molecular Morphology) guide written by well-known writer whose to say well how to make book that could be understand by anyone who have read the book. Written within good manner for you, dripping every ideas and publishing skill only for eliminate your own hunger then you still skepticism Gold and Silver Staining: Techniques in Molecular Morphology (Advances in Pathology, Microscopy, & Molecular Morphology) as good book not merely by the cover but also through the content. This is one reserve that can break don't ascertain book by its protect, so do you still needing a different sixth sense to pick this!? Oh come on your examining sixth sense already told you so why you have to listening to one more sixth sense.

Trina Durham:

You are able to spend your free time to read this book this book. This Gold and Silver Staining: Techniques in Molecular Morphology (Advances in Pathology, Microscopy, & Molecular Morphology) is simple to create you can read it in the area, in the beach, train as well as soon. If you did not possess much space to bring the actual printed book, you can buy the e-book. It is make you better to read it. You can save the book in your smart phone. And so there are a lot of benefits that you will get when one buys this book.

Steven Green:

As we know that book is significant thing to add our knowledge for everything. By a book we can know everything we want. A book is a pair of written, printed, illustrated or maybe blank sheet. Every year ended up being exactly added. This guide Gold and Silver Staining: Techniques in Molecular Morphology (Advances in Pathology, Microscopy, & Molecular Morphology) was filled in relation to science. Spend your time to add your knowledge about your technology competence. Some people has several feel when they reading any book. If you know how big selling point of a book, you can really feel enjoy to read a e-book. In the modern era like today, many ways to get book that you just wanted.
